The texts comprising this book are direct reproductions of the manuscripts submitted by their authors. The Scientific Committee declines responsibility for their contents and for the legal repercussions which might be derived from their publication. The responsibility for these texts is held by the authors.

The responsibility for the non-appearance of several texts in these Proceedings pertains to their authors alone. The texts concerned were not submitted to the Secretariat before the established deadline. (26.01.98)

Presentation

The Symposium will cover all aspects of safety in the process industries, including transportation and storage of hazardous materials. Its objective is to bring together plant managers, engineers, safety experts, regulators and scientists of various disciplines to exchange new ideas, publish the latest works and strengthen ties. Participants will be able to make active exchanges on recent advances, new points of view and approaches to loss prevention by design and in operation. Results of analysis and studies, of experiments, of theoretical approaches and modelling will be presented. Case histories will be treated with preference.
